

Searching for a Specific User and Updating the User Information: Writeup

(Phase 3 - Practice Project 1)

Name: K V Sagar

Git Link : [simpliLearn/Phase-3/10-ParcProj1-UserManager at main · K-V-Sagar/simpliLearn \(github.com\)](https://github.com/K-V-Sagar/simpliLearn/Phase-3/10-ParcProj1-UserManager)

- This project allows the user to search for the user details by using the **ID** and is also allowed to update the details.
- The welcome page displays the project name and allows the user to enter the **ID**.
- Then the user is redirected to a page that contains the **Search Result** and the **Update Menu**.
- The **Search Result** displays all the user details.
- The **Update Menu** shows the User ID that is entered and contains fields to enter new details such as:
 1. New Name
 2. New Email ID
 3. New Password
- An option to go back to the main menu also exists.
- If the user enters a wrong User ID then an error message is displayed.
- In the table **user** the **ID** is made the **primary key**, to ensure no duplicate entries are made (i.e. no two users will have same ID).
