Retrieving the Product Details using the Product ID : Writeup

Name: K V Sagar

- The html file is named **product.html** uses the **post** method.

- It accepts the user **Product ID** and has a submit button.

- The servlet is named **getProdDetailsServlet** and contains the **init(), doPost()** and the **destroy()** methods.

- The query is as follows,

```
select * from products where productID = '"+ prodID +"'"
```

- The **prodID** is the input taken from the user from the field provided in the **index.html** file.

- The result of this is stored in a **ResultSet**.

- A table **products** has been created with the following attributes,
  1. *productid*
  2. *productName*
  3. *quantity*

- A screenshot of the table created with values already added is attached below,

productID	productName	quantity
1	TV	4
2	Washing Machine	8
3	Microwave Oven	22
4	Mobile Phone	15
5	Laptop	9
